Practical 4: Operating System Foot Printing

Date: 01/11/2024

1. The operating system footprinting can be performed by using the Windows Nmap-Zenmap GUI. Using the command nmap -sn (IP address of the network use) will allow to get the available IP address.

- This command (nmap -O) is to perform the operating system footprinting on the selected IP address.

- This command (-p 1-65535 -T4) checks the number of open ports on the selected IP address that were previously opened.
